The Problem

\$15.84B in 2026: Growing at a blistering **15.6% CAGR**, projected to hit **\$50.58 Billion** by 2034.

Too much paperwork: New rules from the Nepal Rastra Bank force companies to check more documents, which is hard to do with current staff.

Identity Spoofing Up: Centralized digital services witnessed a massive **162%** surge in sophisticated document fraud.

Lack of proof: Old-fashioned paper stamping doesn't provide a secure digital record, leaving companies at risk during audits.

40% Drop-Off Rate: Outdated compliance checks drive customers away due to slow manual overhead.

Slow business processes: Relying on offline, manual checks makes companies too slow to compete in today's fast, digital world.

VivadX

Verified Intelligent Validation And Documentation

Smart Document Reconciliation & Verification backed
by Blockchain

The Solutions

AI-Powered Instant Verification

By using Groq Vision AI, VivadX replaces slow manual reviews with sub-5-second automated field extraction, solving the operational latency and high drop-off rates.

Immutable Blockchain Audit Trail

VivadX uses the Tron Nile testnet to generate tamper-proof digital signatures for "Green" verifications, creating the secure, verifiable proof that traditional paper-stamping lacks.

Dynamic Rule Engine

Unlike rigid legacy systems, your JSONB-based criteria engine allows companies to create or update verification rules instantly without needing any code deployments, helping them adapt to changing NRB mandates.

Multi-Document Reconciliation

VivadX automatically compares fields across 1–5 uploaded images to detect conflicts (e.g., name mismatches between KYC and citizenship), effectively catching the sophisticated fraud that causes the 162% surge in identity spoofing.

Ultra-Fast Processing At Scale

Manual KYC Review

Up to 48 Hours

Legacy OCR
Automation

15–30 Minutes

VIVADX

About 5 Seconds

Pairing Groq AI's lightning throughput with FastAPI allows VIVADX to reduce traditional onboarding verification delays by more than 99.8% instantly.

Business Model

Per document = 50rs

Break down

company	min document	Revenue
1	50	2500
50	2500	1,25,000
100	5000	2,50,000

Use Cases

- **Banks & Microfinance:** Instant field extraction, cross-matching, and loan disbursement checks.
- **Manpower Agencies:** Verification of worker contracts, licenses, and destination/salary fraud prevention.
- **Universities & Consultancies:** Authentication of degrees, transcripts, and admission criteria.
- **Government & Subsidy Programs:** Standardized beneficiary ID checks and reduction of duplicate claims.
- **Bank Counter / Spoofing Check:** Real-time comparison between original verified images and presented copies.
- **B2B / API Integration:** Enterprise-level document posting with risk scores and blockchain hashes.
- **Compliance & Audit:** Public on-chain verification proof via TronScan.

Impact

- Cuts document verification time from 5–15 minutes to under 10 seconds per run.
- Reduces manual staff costs via a pay-per-verification model.
- Delivers consistent Green/Orange/Red verdicts across all branches.
- Flags name mismatches, expired IDs, and cross-document errors.
- Anchors Green documents on the Tron blockchain for independent audit.
- Lowers fraud risk with spoofing detection.
- Supports Nepal's 106+ BFIs and 11,000+ branches with NRB KYC/AML compliance.
- Enables API-first integration into existing bank systems.
- Scales to thousands of documents daily without additional staff.

Future Scopes

- Integrate with NRB National ID database for live identity cross-check.
- Develop mobile-responsive UI for bank branch staff and tablet-first spoofing checks.
- Enable PDF upload support and bulk verification APIs.

Competitive Landscape

Core Capabilities	Legacy eKYC Providers	Local Nepalese Manual	VIVADX
Verification Speed	3-10 Minutes	1-2 Business Days	About 5 Seconds
Dynamic Criteria Adaptability	Static Only	High (Manual Humans)	Dynamic (Configured AI)
On-Chain Immutable Ledger	Centralized Storage	Paper/ Local Silos	TRON Network
Cost Per Execution	NRs. 300-500	High Employee Overheads	NRs 50 per execution
Vectorless AI Assistant	Generic Chatbot (No Live Data)	Officer Memory/ Phone Support	Viva AI - Live DB, No Vector DB
API Key + MCP Server	Closed SDK / Weeks to Integrate	No API - Walk in Only	REST API + 6 MCP Tools
